## **Trinity County, Helena Fire**

### **Debris Removal Update**

All of the Debris has been cleaned by Cal Recycle.

### **What's Next...**

- The soil within the footprint of the structure is sampled by TETRA TECH to verify it meets all clean up goals. If necessary there will be another scraping of the soil until the test is passed.
- Once the lot is cleared, erosion control will be implemented in the affected areas (waddles are used where appropriate and the soil will be hydromulched.)
  - a) This work cannot be completed during wet weather as it takes up to 48 hours to dry.
  - b) If a property owner needs to expedite the process they can complete a waiver of the erosion control but it isn't recommended.
- Upon Completion, The County will notify the owner (and Environmental Health, & the Building and Planning Departments).
- Upon clearance, once the proper permits are issued, reconstruction can start.
- In order to rebuild on parcels that are within the "100 year floodplain," owners may be required to hire a surveyor or engineer to complete a flood certificate. The county intends to flag these properties to notify the owners, expect this to be completed prior to the end of November, weather depending.
