## PRESS RELEASE

FOR IMMEDIATE RELEASE

Date: 1/11/2021

Contact: Marcie Jo Cudziol RN, PHN, MPA

### Trinity County Coronavirus (COVID-19) Health Advisory

TRINITY COUNTY – Trinity County Public Health Branch (TCPHB) COVID-19 Mass Vaccination (Vax) Team will begin phased vaccination through drive-thru COVID-19 Vax Point of Distribution (POD) Sites located at Trinity Performing Arts Center (TPAC) in Weaverville beginning January 29, 2021.

COVID-19 Mass Vax PODs will continue in Weaverville every 2-3 weeks as vaccine becomes available to administer first doses to all those in each Phase, ensure a mechanism for second doses, and ultimately culminating in vaccination of the general public. TCPHB expects that COVID-19 vaccine access will expand beyond the TCPHB Mass Vax PODs as more vaccine becomes available and more vaccine providers are added outside of the Public Health system such as Pharmacies and Healthcare Providers.

The start and end time and pre-registration information will be coming out in the next week for the January 29, 2021 closed COVID-19 mass vaccination POD.

#### Eligible for Vaccination on January 29, 2021

Phase 1A (all Tiers):

- All health care providers and caregivers, including but not limited to:
  - Physicians and surgeons
  - Nurses, including nurse anesthetists, nurse midwives, school nurses, licensed practical and vocational nurses, and nurse practitioners

---

- Workers supporting operations of outdoor recreational facilities for the purpose of facilitating physically distanced personal health and wellness through outdoor exercise

Persons in Trinity County moved into Phase 1A due to significant risk from COVID-19:

- Trinity County Residents 75 years of age and older
- Trinity County Residents age 64 through 74 years of age with chronic health conditions that put them at increased risk for severe COVID-19 illness

## **Not Eligible for Vaccination at TCPHB Mass Vax POD**

For safety reasons we will not be vaccinating persons that have any of the following at our COVID-19 Mass Vax PODS:

- Have a history of severe allergic reaction to medication, vaccines, food, or any other substance
- Have a bleeding disorder or are on blood thinners, this does not include persons taking daily baby aspirin
- Pregnant and breast-feeding women.

These persons should seek vaccine from their medical provider when it becomes available.

## **Vaccine to be Administered at TCPHB POD and What is Currently Known**

At this time the TCPHB will be administering Moderna COVID-19 vaccine, we will inform the public as this changes. Here is what we currently know about COVID-19 vaccination:

- With one dose of vaccine, after a week or two, you have some level of immunity but can still get Covid-19 if you're exposed to the coronavirus.
- The second dose of Moderna vaccine cannot be given sooner than 28 days from the first dose, but can be given any time after that.
- A few weeks after the second dose, studies have shown that the vaccine efficacy is approximately 95%.
- Even after getting both doses of the vaccine, since the efficacy is not 100%, you could still get Covid-19, but according to what the science tells us from clinical trials, you're probably going to have less severe disease than if you didn't get the vaccine.

---

- The vaccine has not yet been shown to reduce transmission of the virus. There is just not enough information yet to know if people who are vaccinated could still be carriers of the virus, even if they don't get sick.
- We know so far through clinical trials that the vaccine does provide a lot of protection, essentially reducing the chance of getting the virus and getting severely ill from it.

## Public Health Guidance

It is important to continue to follow the public health guidance around prevention even after receiving the first dose of vaccine including all of the following:

- Proper social distancing of at least 6 feet
- Masking or Face shield at all times when out in public
- Increased ventilation – outdoor versus indoor and adequate air flow in buildings prevents spread when all other preventative measures above are implemented
- Frequent hand-washing and sanitizing high-touch surfaces
- Self-isolate if develop any symptoms consistent with COVID-19
- Self-quarantine if exposed
- Get tested
- Monitor for symptoms, self-isolate, and get tested:
  - Fever or chills
  - Cough
  - Shortness of breath or difficulty breathing
  - Fatigue
  - Muscle or body aches
  - Headache
  - New loss of taste or smell
  - Sore throat
  - Congestion or runny nose
- If exposed, get tested and self-quarantine.
