Trinity County Coronavirus (COVID-19) Health Advisory

TRINITY COUNTY – Trinity County Public Health Branch (TCPHB) has received lab confirmation of the first positive case in a fully vaccinated individual in Trinity County. Overall however, there continues to be the greatest disease burden and risk of severe illness in unvaccinated persons in Trinity County.

What we know:

- Breakthrough infections due to the Delta variant can occur; however, all three (3) COVID-19 vaccines are demonstrating the ability to prevent severe illness.
- 99.5% of deaths are occurring in unvaccinated persons.
- Older fully vaccinated persons with significant underlying health conditions may still have severe illness with the highly virulent Delta variant.
- Confirmed one fully vaccinated person among the recent positive cases in Trinity County.
- Risk is additive - the more exposures to positive persons over time the greater the likelihood of breakthrough infection.
- Masks continue to be an effective prevention strategy in public and indoors when around others with unknown vaccination status or in large crowds outdoors where social distancing is not possible.

What to do to Protect Yourself and Your Loved Ones:

- Get vaccinated, COVID-19 vaccines are safe and effective against severe illness, hospitalization, and “long-Covid”.
- Wear a mask in public and when indoors with others outside your household whose vaccination status is unknown.
- If you have symptoms or are concerned that you have been exposed, contact your healthcare provider.
- If ill get tested and self-isolate until results are available.
- Answer the TCPHB call if you test positive so that we can assist you and your loved ones.
